Cell biology (also called cytology, from the Greek *κύτος*, *kytos*, "vessel") is a branch of biology that studies the structure and function of the cell, which is the basic unit of life. Cell biology is concerned with the physiological properties, metabolic processes, signaling pathways, life cycle, chemical composition and interactions of the cell with their environment.

### **Cell biology - Wikipedia**

The cell (from Latin *cella*, meaning "small room") is the basic structural, functional, and biological unit of all known living organisms. A cell is the smallest unit of life. Cells are often called the "building blocks of life". The study of cells is called cell biology. Cells consist of cytoplasm enclosed within a membrane, which contains many biomolecules such as proteins and nucleic acids.

Mobilizing the immune system via blockade of immune cell inhibitory pathways is revolutionizing oncology clinical practice. Multiple monotherapy agents have been approved and combination therapies are in development. This review discusses key intracellular pathways where development of small-molecule therapeutics is attractive, tractable, and synergistic with biologic-mediated checkpoint blockade.

As the highest-ranked open access journal in its field, *Genome Biology* publishes outstanding research that advances the fields of biology and biomedicine from a genomic and post-genomic perspective. Our responsive international editors provide excellent service and communication to authors throughout the entire publishing experience.

Introduction. Plasmablastic lymphoma (PBL) is a clinicopathological entity that was initially described in 1997<sup>1</sup> and is now considered a distinct subtype of diffuse large B-cell lymphoma (DLBCL) seen more commonly in patients with HIV infection.<sup>2</sup> In the original report by Delecluse and colleagues, 15 of 16 patients were infected with HIV, 1 was an elderly patient, and all the patients had ...

Formation of AGEs leads to the activation of different signaling pathways mediated by a series of cell surface receptors. The most studied AGE-receptor is the multi-ligand receptor for advanced glycation end products (RAGE).
