In classical mechanics, the Euler force is the fictitious tangential force that is felt in reaction to any angular acceleration. That reactive acceleration is the Euler acceleration (named for Leonhard Euler), also known as azimuthal acceleration or transverse acceleration. It is an acceleration that appears when a non-uniformly rotating reference frame is used for analysis of motion and there ...

A rotating frame of reference is a special case of a non-inertial reference frame that is rotating relative to an inertial reference frame. An everyday example of a rotating reference frame is the surface of the Earth. (This article considers only frames rotating about a fixed axis. For more general rotations, see Euler angles

Isaac Newton publicou estas leis em 1687, no seu trabalho de três volumes intitulado Philosophiã! Naturalis Principia Mathematica. As leis expressam os princã-pios relacionados ã dinãçmica da matãçria, ou seja, ã estájtica ou movimento de objetos fã-sicos. Newton, usando as três leis da mecãçnica juntamente com a lei da gravitaãçãõ universal, deduziu matematicamente as leis de Kepler, que ...
