WWV is a shortwave (also known as "high frequency" (HF)) radio station, located near Fort Collins, Colorado. It is best known for its continuous time signal broadcasts begun in 1945, and is also used to establish official U.S. government frequency standards, with transmitters operating on 2.5, 5, 10, 15, and 20 MHz. WWV is operated by U.S. National Institute of Standards and Technology (NIST ...

AM Radio Field Strength Measurements with Confidence

In August 2004, NIST scientists demonstrated a chip-scale atomic clock. According to the researchers, the clock was believed to be one-hundredth the size of any other. It requires no more than 125 mW, making it suitable for battery-driven applications. This technology became available commercially in 2011. Ion trap experimental optical clocks are more precise than the current caesium standard.

Two-point NIST Traceable Certified Calibration for the Palm Abbe digital handheld refractometer, with your choice of documentation level. IMPORTANT: Customers ordering recertification for existing instruments must print out a completed RMA form and include it with the instruments being shipped to MISCO. Your credit card will not be charged until services are rendered.
