Thermodynamic databases contain information about thermodynamic properties for substances, the most important being enthalpy, entropy, and Gibbs free energy. Numerical values of these thermodynamic properties are collected as tables or are calculated from thermodynamic datafiles.

Classical thermodynamics considers three main kinds of thermodynamic process: change in a system, cycles in a system, and flow processes. Defined by change in a system, a thermodynamic process is a passage of a thermodynamic system from an initial to a final state of thermodynamic equilibrium. The initial and final states are the defining elements of the process.

This paper describes an effort to organize the condensed phases thermodynamic data freely available in electronic form within the scientific literature through the design of a special-purpose search engine indexing data electronically available in the "thermodynamic database" (TDB) format. This focus is motivated by the fact that it is widely used and can be readily read or imported into ...

We explore the coupling between association, stability and catalysis in the ubiquitous glycolytic enzyme triosephosphate isomerase (TIM). Ancestral sequence reconstruction of TIM indicates that the structure, overall stability and catalytic properties of this enzyme were present before animals and fungi diverged.
